

Guaranteeing Success in Adaptation

Laura E. Williamson - Project Director

Dec 1, 2011

UNFCCC COP 17 Side Event
Implementation of Adaptation Actions and Tools for Decision-making to Enhance Development Plans

HELIO International

- International non-profit think tank
- Network of energy experts
- Develop tools to ensure delivery of safe, clean, affordable energy services

Why Energy?

- Energy = tool + need
- Energy = transversal
- Energy = cornerstone of adaptation

➔ **Don't forget the "elephant in the room"**

Needs for Adaptation

- Energy = underlying precondition for good adaptation
- Need energy services for:
 - Heating/cooling
 - Education
 - Health
 - Business
 - Transport

➔ **Must climate-proof energy systems and policies**

Assessment tool must...

- ...respond to a variety of needs
- ...support ecocodevelopment
- ...address specific infrastructure needs of energy
- ...outline emergency and crisis management procedures

➔ **Use TIPEE**

TIPEE

- Helps decision-makers use readily available information to devise better energy decisions
- 24 simple indicators - check how well provision of energy services are meeting needs

■ Environment	■ Governance
■ Economic	■ Vulnerability
■ Social	■ Resilience
■ Technical	

Results

- Ensures that...
 - Energy decisions are in-line with ecodevelopment
 - Energy services available under changing climatic conditions
 - Projects and policies are climate-proofed

Adaptation activities are successful

TIPEE:
 Traitement de l'information pour les politiques énergétiques et l'écodeveloppement
 Processing Information for Energy Policies Conducive to Ecodevelopment

Check how well governments are providing their citizens with accessible, clean, and affordable energy services!

What it is...
 TIPEE is a tool that helps decision-makers make use of available information to make better energy decisions.

It is a methodology and a series of indicators that allows decision makers to check how well national energy policies are contributing to ecodevelopment under fluctuating weather conditions.

TIPEE stands for: Traitement de l'information pour les politiques énergétiques et l'écodeveloppement / Processing Information for Energy Policy and Ecodevelopment

Why this approach...
 Energy is central to our existence; however energy's ubiquitous nature means that it is too often "ignored" when it comes to developing adaptation activities. However, without a good supply of energy we as humans would find it extremely difficult to survive, let alone prosper.

Given the importance of energy—both from social and economic development perspectives—**Identifying, understanding and reducing**
